Exam : **Comm-Dev-101**

Title : Salesforce Certified B2C
Commerce Cloud Developer

Vendor : Salesforce

Version : DEMO

NO.1 Given the code snippet above, what should be added after this code so it can be used for page component display?

- A. Base.render = render;
- B. Module.exports.render = render;
- C. Module.exports = render;
- D. Module.exports = server.exports();

Answer: D

NO.2 A developer needs to show only car accessories when shoppers use the search term car accessories and exclude technology accessories and household accessories.

Given the above requirement, what is the recommended approach using the Search Dictionaries Dashboard?

- A. Create a Synonym Dictionary entry: car accessories, household, technology.
- B. Create a Common Phrase Dictionary entry: car accessories.
- C. Create a Common Phrase Dictionary entry: car accessories, NOT household, NOT technology.
- D. Create a Synonym Dictionary entry: car accessories, household, technology.

Answer: B

NO.3 A client has three different sites with three locales. Two of the sites share a library and one site has a private library.

What does the shared library allow in this context?

- A. Sharing content slots between sites
- B. Sharing content assets among locales
- C. A Sharing content assets between sites
- D. Sharing content slots among locales

Answer: C

NO.4 A developer has a sandbox with code to log a message during execution, and the following code:

```
var Logger = require('dw/system/Logger');  
Logger.info(message);
```

After the code executes, the developer does not see any log file with the message in the WebDAV folder. Which two tasks does the developer need to perform to correct this issue? Choose 2 answers

- A. Request that the developer's account be given permission to the Log Center of the current realm.
- B. Set the root log level to debug.
- C. Check the box for Info under Log Files.
- D. Set the logging global preference to true.

Answer: A,C

NO.5 A Newsletter controller contains the following route:

```
Server.post('Subscribe', function (req,res,next){
```

```
var newsletterForm = server.forms.getForm('newsletter');var CustomObjectMgr =
require('dw/object/CustomObjectMgr'); if(newsletterForm.valid){ try{ var CustomObject =
CustomObjectMgr.createCustomObejct('NewsletterSubscription', newsletterform.email.value);
CustomObject.custom.firstName = newsletterForm.fname.value; CustomObject.custom.lastName =
newsletterForm.lname.value;-
} catch(e){
//Catch error here
}
}
next();
});
```

Assuming the Custom Object metadata exists, why does this route fail to render the newsletter template when the subscription form is correctly submitted?

- A. Custom Objects can only be created by Job scripts
- B. The Subscribe route is missing the server.middleware.http middleware.
- C. The CustomObjectMgr variable should be declare outside of the route.
- D. The Custom Object creation is not wrapped in a Transaction.

Answer: D

NO.6 A developer customized the Cart-Show controller route with a LINK cartridge that adds social media data. There is a new requirement to add a datalayer object to the Cart-Show controller route. How should the developer achieve this to ensure that no code change will be needed if the client decides to remove the LINK cartridge?

- A. Replace the Cart-Show controller route in client cartridge and add datalayer object to the viewData variable.
- B. Replace the Cart-Show controller route in client cartridge and add datalayer object to the viewData variable. Ensure that the client cartridge is on the left of the U.HK cartridge m cartridge path.
- C. Append Cart-Show controller route in the client cartridge and add datalayer object to the viewData variable.

Answer: C

NO.7 A client has a requirement to render different content on the homepage based on if the customer is logged in or guest user.

What should a developer implement to achieve this requirement?

- A. Write specific custom code in the Content Asset for a customer that is a registered, versus unregistered, user.
- B. Set the Content Slot configuration so it is based on the system customer group registered, versus unregistered.
- C. Set the Content Asset configuration for a customer that is a registered, versus unregistered, user.
- D. Add specific custom messages in Page Designer for a customer that is a registered, versus unregistered, user.

Answer: B

NO.8 When exporting a price book from an external system, which file format or formats should a

developer use so it can be imported into a B2C Commerce site?

- A. JSON only
- B. XML only
- C. CSV only
- D. XML and CSV

Answer: A

NO.9 A developer working on a multi country site is asked to store country specific data that drives the creation of a country selector. Examples of the data stored are:

Pricebook to be used

Image URL for country flag

The data used in staging also applies in production, but only for this site.

Which approach should the developer take to implement these requirements?

- A. Extend the Locale System Object to contain the custom data for each country.
- B. Create a replicable, site-specific Custom Object with the custom data for each country.
- C. Create site-specific content assets to store the data for each country.

Answer: B

NO.10 Universal Containers needs to have Apple Pay disabled for the country of Spain. Which Business Manager module should the Developer use to meet this requirement?

- A. Merchant Tools > Ordering > Payment Methods
- B. Merchant Tools > Site Preferences > Apple Pay
- C. Merchant Tools > Ordering > Payment Processors
- D. Merchant Tools > Site Preferences > Payment Types

Answer: A

NO.11 Universal Containers created a site export file from staging in the global export directory. How should the Digital Developer update their sandbox using this staging site export file?

- A. Perform a data replication from staging.
- B. Use the Site Development > Site Import & Export Business Manager module.
- C. Download the site export file and use UX Studio to transfer the data to the sandbox.
- D. Use the Site Development > Import & Export Business Manager module.

Answer: B

NO.12 A merchant wants customers to be able to order gift vouchers via their site. Since they can issue an unlimited number of these digital vouchers, this item should be available to sell at all items. How can a developer use Business Manager to ensure that the gift vouchers are always available?

- A. Check the perpetual flag in the product inventory record
- B. Check the Available to Sell (ATS) flag for the product to set
- C. Set StockLevel = maxAllocation for the product.
- D. Manually set the inventory to a high number.

Answer: A

NO.13 A developer wants to configure the following products so that same search results are

returned regardless of the search term used. The search term can be bag, purse, pocketbook, and tote. How should the developer configure this?

- A. Synonyms
- B. Hypernyms
- C. Hyponyms

Answer: B

NO.14 A Digital Developer is working on a multi-site realm. A new site requires a different layout for the account landing page. The business logic and data model remain the same. The existing code is in AccountControl.js and accountlanding.isml in the app_storefront cartridge. The app_storefront cartridge contains code for all other business functions. The cartridge path for the new site is currently int_cybersource:int_paypal:app_storefront.

The Developer creates a new cartridge named app_newsite that contains only the accountlanding.isml template for the new site.

Which modification should be made to the new cartridge path?

- A. Set the cartridge path so that app_newsite is before app_storefront.
- B. Set the cartridge path so that app_storefront is before int_cybersource.
- C. Set the cartridge path to include only app_newsite.
- D. Set the cartridge path so that app_newsite is after app_storefront.

Answer: B

NO.15 Given the file structure below, which ISML method call renders the customLandingPage template?

- A. ISML.renderTemplate('cartridge/templates/default/content/custom/customLandingPage');
- B. ISML('content/custom/customLandingPage');
- C. ISML.render('content/custom/customLandingPage');
- D. ISML.renderTemplate('content/custom/customLandingPage');

Answer: D

NO.16 A developer is working on a new site for the U.S based on an existing Canadian site. One of the requirements is a change to the address form. The current Canadian form has an <options> list with the correct two-letter abbreviation for the provinces.

The U.S. requirements are to:

Have an <options> list with the correct two-letter abbreviation for the states in place of the province field.

Set the U.S site locale.

Add the options list field definition to the XML file.

How should the developer set up the files before making the required edits?

- A. Create a copy of existing address.xml file in the default folder. Rename that file to
- B. Create a new sub-folder in the forms folder. Name it US. Copy existing address.xml file in
- C. Create a copy of existing address.xml file in the default folder. Rename that file to
- D. Create a new sub-folder in the forms folder. Name it en_US. Copy existing address.xml file

Answer: C

NO.17 A developer is tasked with implementing the necessary code for a new Page Designer component.

What are the two purposes of the JSON metadata definition file that the developer creates? Choose 2 answers

- A. Defines regions within the component type.
- B. Defines the responsive layout of the rendered template.
- C. Defines the business and rendering logic of the component required by the merchant.
- D. Defines the attributes that a merchant enters when using the component type.

Answer: A,D

NO.18 A developer is asked to implement a simple call to an authentication - protected REST web service.

Which configuration is valid?

- A. Add the authentication password to the service credentials.
- B. Configure the authentication username using a site preference.
- C. Insert the service's endpoint in a .properties file.

Answer: B

NO.19 A developer is tasked with the development of a new Page Designer Page Type, as requested by the merchant.

How should they define the rendering logic of the page?

- A. Implement a JavaScript file with a render () function.
- B. Implement a metadata JSON file with a "render" property.
- C. Implement a Controller file with a "render" route.

Answer: A

NO.20 A Digital Developer is asked to optimize controller performance by lazy loading scripts as needed instead of loading all scripts at the start of the code execution.

Which statement should the Developer use to lazy load scripts?

- A. importPackage () method
- B. \$.ajax () jQuery method
- C. local include
- D. require () method

Answer: D

NO.21 A client has custom object definition and requirement that occasional data changes in staging also need to exist in production, Which task should the developer perform to meet these requirements when setting up the custom object?

- A.** Create two copies of the custom object in staging and set Sharing = True.
- B.** Create the custom object definition in staging as Shared
- C.** Create the custom object definition in production as Replicable
- D.** Create the custom object definition in staging as Replicable

Answer: D
