Latest pdf braindumps provider, high pass rate

**Exam** : **VCI550**

**Title** : VMware Certified Instructor  
on vSphere 5

**Vendor** : VMware

**Version** : DEMO

NO.1 A vSphere administrator is attempting to migrate a virtual machine, but the progress bar for the migration remains at 10%.

Which issue could be preventing the vMotion migration?

- A. A networking problem between the source and destination hosts exists at the physical layer.
- B. The virtual machine is not on shared storage visible to the source and destination hosts.
- C. The vMotion migration priority for this migration was set to High.
- D. The vMotion network is saturated.

**Answer: A**

NO.2 An administrator is installing ESXi on several hosts attached to iSCSI storage.

Why would the administrator detach the host from the IP storage network prior to installation?

- A. It decreases the time the installer needs to search for available disk drives.
- B. It allows the installation of a generic VAAI component for IP storage.
- C. It prevents ESXi from installing vSphere Flash Cache to the IP storage.
- D. It is required when installing ESXi onto a physical server that utilizes IP storage.

**Answer: A**

NO.3 A SAN administrator recently installed a storage encryption switch on the Fibre Channel Fabric.

Shortly after the deployment, several new VMFS5 datastores recently created were dismounted.

Attempts to manually mount them fail. VMFS5 upgraded datastores are unaffected. All Storage arrays in use support VASA and VAAI.

What is the root cause of this problem?

- A. All newly created VMFS5 datastores are tagged ATS\_Only. The storage encryption switch blocks the ATS command.
- B. All newly created VMFS5 datastores are tagged XCOPY\_Only. The storage encryption switch blocks the XCOPY command.
- C. All newly created VMFS5 datastores are tagged WRITE\_SAME\_Only. The storage encryption switch blocks the WRITE\_SAME command.
- D. All newly created VMFS5 datastores were formatted with 1MB block size. The storage encryption switch does not support this block size.

**Answer: A**

NO.4 What two IT infrastructure components are virtualized by vSphere Essentials? (Choose two.)

- A. Networks
- B. Applications
- C. Storage
- D. Management

**Answer: A,C**

NO.5 An administrator is planning a vSphere Fault Tolerance implementation for 6 virtual machines.

Which two virtual disk types are supported with FT? (Choose two.)

- A. Raw Device Mapped LUN configured for Virtual Compatibility Mode
- B. Raw Device Mapped LUN configured for Physical Compatibility Mode

- C. Virtual disk thick provisioned, eager zeroed
- D. Virtual disk thick provisioned, lazy zeroed

**Answer:** A,C

NO.6 An administrator has configured hardware acceleration for a Fibre Channel storage array. After a recent maintenance event, the administrator finds that cloning and migration operations are taking excessively long to complete.

Which two settings could cause hardware acceleration to become disabled? (Choose two.)

- A. VAAI Plugin Name = VMW\_VAAIP\_SYM
- B. VAAI Plugin Name = VMW\_VAAIP\_NETAPP
- C. VMFS3.HardwareAcceleratedLocking = 0
- D. Datamover.HardwareAcceleratedInit = 0

**Answer:** C,D

NO.7 A vSphere administrator needs to enable Distributed Resource Scheduling (DRS) in an existing vSphere environment:

The environment contains a High Availability (HA) cluster with eight ESXi hosts.

Six ESXi hosts are not in a cluster.

DRS should be used on as many hosts as possible.

Initial placement of virtual machines should be automatically performed.

Migration recommendations should be provided, but not performed without approval.

Which procedure should the administrator perform to accomplish this task?

- A. Select the datacenter and create a DRS cluster. Add the six remaining hosts to this cluster, then enable DRS. Edit the DRS settings and change the automation level to Partial.
- B. Select the existing HA cluster. Add the six remaining hosts to the cluster. Enable DRS, then edit the settings and change the automation level to Manual.
- C. Select the datacenter and create a DRS cluster. Add the six remaining hosts to this cluster, then enable DRS. Edit the DRS settings and change the automation level to Manual.
- D. Select the existing HA cluster. Add the six remaining hosts to the cluster. Enable DRS, then edit the settings and change the automation level to Partial.

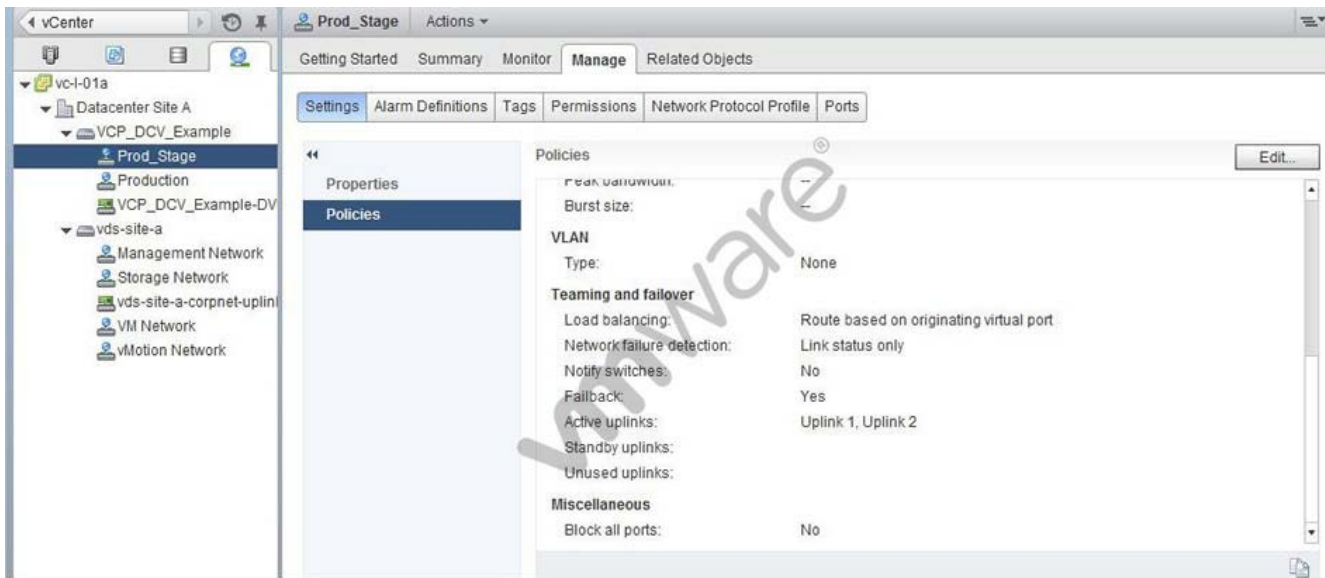

**Answer:** D

NO.8 During the installation of ESXi, a vmkernel interface can be configured with what capabilities?

- A. Management traffic
- B. Management traffic and vMotion
- C. Management traffic, vMotion and Fault Tolerance logging
- D. Management traffic, vMotion, Fault Tolerance logging and IP storage

**Answer:** A

NO.9 -- Exhibit -

-- Exhibit -

An administrator receives notice of a large number of ARP table issues. The issues began after a maintenance window 36 hours ago. The issue did not exist prior to the maintenance window. Which change was made to the port group that is causing the ARP table issue?

- A. Notify Switches was changed to No.
- B. Uplink 2 was changed from Standby to Active.
- C. Failback was changed to Yes.
- D. Network failure detection was changed to Link status only.

**Answer: A**

NO.10 An administrator is migrating 135 virtual machines from a vSphere Standard Switch to a vSphere Distributed switch. The migration reports an error and only some of the virtual machines are transferred.

What is causing the error to occur?

- A. The vSphere Distributed Switch was created with a single, default port group.
- B. The switch has become disconnected from an ESXi host.
- C. The port group on the vSphere Distributed Switch was not configured with an Elastic port binding.
- D. The virtual machine that failed to transfer did not have a network adapter.

**Answer: A**

Topic 3, Plan and Configure vSphere Storage

NO.11 A VMware administrator determines that a low priority virtual machine is negatively affecting the disk I/O performance of a higher priority virtual machine. The virtual machines are hosted on the same datastore presented to the same ESXi host.

Which configuration option should the VMware administrator use to resolve this issue?

- A. Increase the disk share value for the high priority VM.
- B. Migrate the low priority VM to another ESXi host.
- C. Create a Storage Profile for each priority level.
- D. Enable vSphere APIs for Array Integration (VAAI).

**Answer: A**

NO.12 A vSphere administrator manages a three host cluster with 20 VMs. The HA cluster is configured with the Host Failures the Cluster Tolerates admission control policy and all other settings are set to default values. The administrator determines that one of the VMs is not able to power on. After further inspection, it is determined that this VM cannot power on because of a very large CPU reservation.

Which cluster advanced HA setting can the administrator modify to enable the virtual machine to power on?

- A. Lower das.vmcpumaxmhz attribute value
- B. Higher das.vmcpuminhz attribute value
- C. Lower das.slotcpuoutmhz attribute value
- D. Higher das.slotcpuinhz attribute value

**Answer:** D

NO.13 What should an administrator do to configure multi-pathing using software iSCSI?

- A. Bind the VMkernel ports to the software iSCSI initiator
- B. Configure Zoning between the hosts and SAN switches
- C. Configure NIC teaming on the associated uplinks
- D. Ensure jumbo frames are enabled end-to-end

**Answer:** A

NO.14 Which controller is recommended for high disk I/O workloads?

- A. BusLogic Parallel
- B. LSI Logic Parallel
- C. LSI Logic SAS
- D. VMware Paravirtual

**Answer:** D

NO.15 What is a valid plug-in status for a plug-in that has been added to a vSphere client?

- A. Disabled
- B. Unknown
- C. Stopped
- D. Installed

**Answer:** A
